

# TEST INTERVIEW

## MACHINE LEARNING INTERNSHIP

### **1. Test Objectives**

Your task is to read the attached technical paper and share your insights. We'd like to understand your perspective on the paper: What did you learn from it? What is its main focus? Are there any areas you found ambiguous or difficult to understand?

These are open questions, so there are no right or wrong answers. The objectives of this exercise are to:

- Gain additional insight about you, beyond your resume, to get to know you better.
- Provide material for discussion during the interview.
- Confirm your interest in the role and assess your willingness to invest time in the opportunity.

### **2. Deliverable**

Please submit a PDF document summarizing your thoughts on the paper. The document should be no longer than one A4 page and can be written in either French or English, according to your preference.

You are welcome to use any tools or resources to assist you. What matters most is your ability to understand the topic and show that you can handle similar subjects effectively.

Good luck!
